

Center Spear

Slickline Downhole Tools

Features

- Simple, Robust
- Multiple size top subs to adapt to the well requirements

The Hunting Center Spear is designed to retrieve broken wireline from the well. Typically used where recovery attempts with multi-prong wire grabs have been unsuccessful.

The Center Spear can be run with a fishing tool string using a dummy rope socket and pulling tool.

The Center Spear can also be run in tandem with a skirted Wire Finder to help prevent the tool bypassing the wireline or standalone using the top sub as a no-go.
