

Bulldog Spear

Slickline Downhole Tools

Features

- Simple, robust
- Available in different sizes to suit the application
- Available in both positive and releasable models

Benefits

- 'Self-adjustable' to variances in the Fish I.D.

The Hunting Bulldog Spear is a heavy-duty fishing tool designed for internal engagement of tubular items within the wellbore.

Once latched into a fish, the Positive Spear cannot be released and should always be deployed on a dummy rope socket and pulling tool to ensure that the fishing tool string can be recovered to surface.

The Releasable Spear can be jarred to shear pins, release the tool from the fish and retrieve to surface.

These can be manufactured to engage internally from very small I.D. to large I.D. tubulars.

When ordering please specify the following information as there are various components that can be changed to ensure the best possible spear for the job is manufactured:

- Internal profile of fish
- OD of fish
- Well limitations
- Well conditions

Contact Hunting for information and options for the Dummy Rope Socket, Pulling Tools and other companion tools.
