

## Wireline Stem Bars - Tungsten Filled

Hunting Tungsten Filled Wireline Stem Bars, often referred to as “sinker bars”, are designed to serve two purposes. They provide the weight required to overcome friction and pressure differential within the stuffing box during wireline operations, allowing the toolstring to descend into the well. They also provide kinetic energy, which is converted into a downward or upward jarring force as required.

Due to its mass, tungsten stem provides more weight than standard stem of the same dimensions.

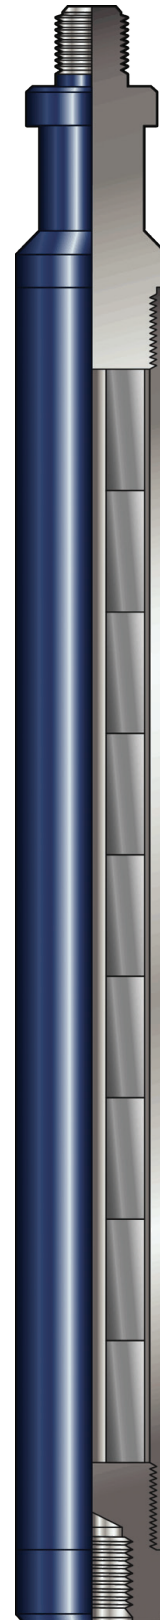

Hunting Tungsten Filled Stem Bars are available in various diameters and lengths. They are supplied with industry standard pin by box connections complete with fishing necks.

 They provide the weight required to overcome friction and pressure differential within the stuffing box during wireline operations, allowing the toolstring to descend into the well.
